WORK EXPERIENCE

Go Developer Intern

05 Aug 2026 - 03 Nov 2026

Yandex Storage Infrastructure Team

Designed and built a distributed Go service to run automated checks on the infrastructure layer of an object storage service.

- Each check runs as a separate module, so new checks can use the same runner. I used PostgreSQL to coordinate runs across service instances.
- Extended the gRPC API, CLI and PostgreSQL data layer so operators can configure, enable and disable checks. Added input validation and access controls.
- Added unit and integration tests, metrics and structured logging. Set up installation and startup, and documented how to operate the service.

EDUCATION

Information Systems Engineering

2024 - 2028

Innopolis University 🇷🇺

Bachelor's Degree

Computer Science

Feb 2026 - Jul 2026

Beijing Institute of Technology 🇨🇳

Exchange Programme

ACHIEVEMENTS

Admitted to Innopolis University on a tuition-free basis
2024

Winner, Moscow Pre-Professional Olympiad, Product IT track
2024 - Link

Second-degree prizewinner, Rosatom Informatics Olympiad
2024 - Link

Finalist, Tinkoff PROD Software Development Olympiad
2024 - Link

Finalist, Izumrud Mathematics Olympiad
2024 - Link

Finalist, Izumrud Informatics Olympiad
2024 - Link

Graduated from high school with a silver medal
2024 - Link

Finalist, Pre-Professional Olympiad, Information Technology track
2023 - Link

Finalist, STANKIN Data Science and Big Data Hackathon
2022 - Link

SKILLS

Go · Python · FastAPI · gRPC · Swagger · Git · Linux · Nginx · Traefik · Docker · Docker Compose · CI/CD · SQL · SQLite · PostgreSQL · sqlc · Redis · Unit tests · Integration tests · OpenTelemetry

PROJECTS

ShootingSeas: Promotional Web Game with Prizes
A Battleship-style game developed for a marketing campaign. Users register on the website for a chance to play a round and win prizes.
React, Django, SQLite

GreenhouseApp: Remote Irrigation Control System
A Kotlin Android app for monitoring and controlling greenhouse irrigation. Connects to the greenhouse API to retrieve sensor data and control water valves.
Kotlin, Firebase

Petpreneur: Platform for Collaborative Projects
A platform that brings together professionals from different fields to collaborate on projects and startups.
Python, Django, SQLite, CI/CD

HabitTracker: Gamified PWA for Building Habits
A responsive PWA built with Next.js for tracking and developing healthy habits. Includes a level progression system.
NextJS, PWA

NFT Market Offense: Experimental NFT Trading Platform
A Flask platform for creating and trading images without cryptocurrency. Built to explore REST APIs, routing, and frontend integration.
Python, Flask, SQLAlchemy, SQLite

Tinkoff Meets: Secure Meeting Management System
An application for scheduling and conducting meetings between Tinkoff Bank representatives and corporate clients.
FastAPI, NextJS, Docker, PostgreSQL, Tortoise ORM, CI/CD

COURSES

Completed the training course for the "Sozday NASHE" competition in the "Young People Without a Business" category
2026 - Link

Completed Advanced React, a course in frontend application development
2023 - Link

Completed Yandex's "Web Development with Django" specialisation
2023 - Link

Completed "Industrial Programming in Python" with a score of 100+ points
2023 - Link

Completed "Fundamentals of Python Programming" with a score of 70+ points
2022 - Link

INTERESTS

In my free time, I solve competitive programming problems, explore Linux server configuration, study foreign languages, and run a YouTube channel. I enjoy travelling and driving. I am interested in entrepreneurship and am learning the fundamentals.

I plan to pursue a master's degree in China, with Tsinghua University and Peking University as my target universities. In the longer term, I would be interested in living and working in both Russia and China. Potential directions include trade between the two countries or helping Russian companies find Chinese partners and explore opportunities for cooperation.

Twitch Notification Bot:
Stream Alerts for Discord
A bot that notifies Discord communities when the Twitch channels they follow go live. It supports slash commands and is designed to increase audience engagement and traffic for streamers.
Python, Pycord, Twitch API, Tortoise ORM, PostgreSQL
